• Extensive working experience in Functionality Testing, Non - Functional Testing, Regression Testing and Automation Testing.

• Working with TestNG, Annotations, Data Provider and Mantis tool in Hybrid automation framework.

• Active participation in meetings like sprint planning, estimation, retrospective and responding to daily scrum calls, status calls.

🛍 Projects

16 Months

E-commers Project

This project is basically for easy checkouts, ease for order placements as well as searching of products. Actual focus is on simple robust and accurate product delivery. The source code is written in a way to extend new external modules when admin requires. current modules include User management, product management, shopping cart, checkout process, order management, security and privacy modules etc.

Our team has collaborated with developers to create and execute test plans for new feature releases, ensuring a seamless integration process. Also conducted end-to-end testing, including functional, usability, security, and compatibility testing, ensuring the platform met high-quality standards. Played a key role in creating a robust testing culture, promoting continuous improvement and innovation within the QA team.
